## **PRESS RELEASE**

March 31, 2005

Avtron Manufacturing's Industrial Automation Division received a contract to design, supply and commission it's Performance View™ Process Diagnostic System for the BOF Shop at Wheeling-Pittsburgh's Mingo Junction Mill in Steubenville, OH. The order follows an earlier upgrade of the BOF Vessel A and B Tilt Drives that was installed and commissioned by Avtron. This final part of the upgrade will consist of a high-speed data acquisition system that will automatically and continuously gather critical drive and process data from the drive and process computer systems on the BOF. The contract also includes 24/7/365 Advanced Diagnostic Maintenance Service (ADMS) Remote Service Coverage. With this service, Avtron's Technical Support Team can monitor and diagnose the BOF system remotely from its Independence, OH. The system is scheduled to be installed and commissioned by the end of April 2005.
